Product Information

SAP Signavio
Process Governance
Focus on value, not repetitive tasks
SAP Signavio Process Governance

Turn your business process models into standardized process governance workflows that can be rolled out across your organization. Build prototypes and complete workflows for the rapid deployment of your models, and integrate task management functions to capture, connect, govern and communicate how work is done. The result is a high level of consistency and efficiency throughout your company, supported by an easy-to-use and accessible workflow solution.

SAP Signavio Process Governance offers out-of-the-box, enhanced process governance capabilities for process modeling and rapid approval. With SAP Signavio Process Governance, you can create automated workflows based on your business process models quickly and simply. Coordinating tasks and triggering maturity & regulatory assessments between teams for process documentation and implementation becomes easier. Plus, you can keep track of work in one place, and ensure accountability through assigned activities. This means you save time and money, and you can be confident your business processes will run the same way, every time.

SAP Signavio Process Governance integrates seamlessly with other Signavio business transformation solutions, helping companies better manage the process lifecycle. Signavio customers can export workflow data from SAP Signavio Process Governance directly into SAP Signavio Process Intelligence and Live Insights. This transfer will enable in-house investigations of organizational data using powerful process intelligence analytics, enabling real-time insights into how workflows and processes can be optimized.

This solution has helped us save time.

Stanton Attree, Principal Business Process Analyst at Met Office
A better way to work

SAP Signavio Process Governance gives you the power to automate repetitive process governance workflows, allowing employees to concentrate on value-adding work. By creating forms, checklists, and decision points, setting up email notifications for deadlines, and collaborating on shared task lists, you can identify and avoid unnecessary work. Complete the things you need to, faster and more efficiently.

Game-changer

- Overcome implementation challenges with uniform process design across the whole organization
- Govern processes with modeling that is standardized within the process architecture
- Significantly reduce time spent coordinating staff – task lists can be viewed and managed collaboratively, including an in-built commenting function
- Cut down on email traffic and unnecessary meetings
- Integrate workflows and specific tasks with commonly-used cloud-based software, as well as with your own IT systems

Keep up with change

SAP Signavio Process Governance is a perfect starting point for even the most complex task or activity. The intuitive interface makes it easy to turn process models into workflows, so you only need the essential features of the process such as tasks and decisions to start with. You can add more details (like custom notifications, access control, or automatic reminders) later on. Don’t let growth slow you down!

Game-changer

- Establish 360° process governance with approvals, maturity assessments & more
- Simple drag & drop form builders for accelerated user experience
- Scale up your workflows as your business grows
- Get rid of spreadsheets, and track your tasks directly
- Get started quickly, while still getting the benefits of a sophisticated workflow platform
Automated approvals

One of the common sticking points for any workflow is approvals—a specific task that needs to be completed by a specific person with sufficient authority, before the process can continue. In the past, these approvals needed to take place outside of the workflow itself. However, with SAP Signavio Process Governance, manual decisions can be automated and standardized.

This not only reduces the risk of a wrong decision, but also allows the processes based on it to be carried out more efficiently. The automated approvals process makes it possible to react quickly to changes in order to ensure your decisions are recorded, which is especially important to ensure compliance with internal and external regulations and policies.

Finally! A fully functioning process management tool that everyone can use!

Gartner Peer Insights

Coordination and onboarding

Collaborative effort is the secret to success. SAP Signavio Process Governance gives you a clear indication of exactly where a given process is up to, and what the next step will be. This means fewer delays caused by abandoned or forgotten tasks, greater accountability in decision-making, and more flexibility to roll out process improvements consistently.

Onboarding new staff becomes easier, as they can see at a glance exactly what they need to do, and where to access the resources they need. In addition, SAP Signavio Process Governance supports better communication and coordination of tasks, including an improved ability to hand over incomplete work to a colleague, without the usual delay.

Game-changer

- Ensure consistent, higher-quality results by reducing variations in how work is done
- Offer better service to internal and external customers by completing work more quickly
- Create an affordable and easily accessible audit trail of your work by tracking decision points and completed tasks
Signavio reduces the time taken to deliver value from your intelligent process mining initiatives, RPA at scale imperatives, end-to-end process orientation, collaborative efforts, customer excellence strategies... and more!
