For 35 years, MTF Biologics, a global non-profit organization, has been saving and healing lives by providing safe, high-quality allografts from donated human tissues for orthopedic, wound care, and plastic and reconstructive surgery. Over time, the company’s technology needed an upgrade to facilitate accurate decision making, so it sought an efficient solution with enhanced collaboration capabilities and end-to-end visibility.

Now, with a user-friendly and robust system that eliminates paper-based processes, MTF Biologics can more proficiently pioneer cutting-edge medical treatments for patients with critical illnesses and conditions with reliable, real-time data.
Streamlining On-Premise and Remote Collaboration with SAP® Signavio® Solutions

Before: Challenges and Opportunities
- Complex, paper-based process for gathering donor data
- Antiquated legacy system that didn’t leverage new technology
- Inefficient business processes developed via hiring consultants
- Growth opportunities needed to be identified

Why SAP and BPM-D
- Pragmatic and proven approach to establish process management discipline
- Enhanced collaboration tools and approach for performance improvements
- Ongoing knowledge transfer during and beyond specific projects
- Easy to use process optimization tools with little training

After: Value-Driven Results
- Return on investment projected for foreseeable future
- Quick decision-making capability with accurate, relevant data
- Fluid processes across all departments with data updates in real time

"Implementing SAP Signavio solutions, was like turning on the lights and seeing the whole picture. It made things a lot simpler. And BPM-D helped us to make this happen quickly and effectively."

Steve Smith, Associate Director of Business Process Management, MTF Biologics
